

Viking Control Upgrade

Viking Model A Centerless Grinding Machine Upgrade

Includes:

- New motor drives
- New computer
- New control board
- UPS for computer
- New LCD monitor
- New software
- Misc control equipment
- New KVM

Benefits:

- Only 5 days for install
- No retraining required
- Reuse old dress programs
- Extend machine's life.

The motor drives and control board are obsolete on the model A Viking, making spare parts difficult to find. To fix this problem we have created an upgrade that includes the installation of new motor drives, a new LCD monitor, and a new computer with a new control board. This upgrade will extend the useful life of the machine. No operator retraining is required since the machine operations will be the same as before. In addition, all motion programs originally created for the dressers can be reused on this upgraded control.
